

🌸 Oh the anticipation! ... **FLOWERING**
time **SOON!**

**Nearly time to
enjoy the flowers!!**

So excited that Everlastings planted in May are starting to flower! Even though the weather has been extremely cold and wet, and we have had several very frosty nights, everlastings are pushing through to erupt with their pink blooms!

🌸 **Missed the May planting?**

Don't worry — you can still enjoy flowers this season! 😊

TIPS FOR LATE-SOWN SEEDS:

🌱 Don't worry if you're planting everlastings later in the season! They will still germinate and thrive. To give your plants the best chance for quick growth and vibrant blooms by spring, follow this simple guide:

1. Fertilise the soil:

Start by applying a good quality all-purpose fertiliser to the area you intend to plant. The fertiliser will give your plants a boost, ensuring they have the best chance for rapid growth.

2. Dig up the soil:

Turn over the soil to aerate it, creating an ideal seedbed for your seedlings to germinate without the hindrance of a compaction. Digging up the soil will also mix in the fertiliser at depth, ensuring it is not at concentrated levels on the surface, which can harm germinating seedlings.

3. Sow the seeds:

Evenly sprinkle the everlasting seeds on top of the prepared soil.

4. Lightly rake the soil:

This protects the seeds from wind, heavy rain, and insects, while also enhancing seed-to-

soil contact, which promotes faster germination.

By following these steps, your everlastings will flourish and grow without any obstacles. Happy planting, and look forward to a beautiful display of flowers in spring! 🌸

🌸 Plant Now 🌸

DOWN ON THE FARM

A stunning vista of a lush oat crop rolling over the gentle hills, beautifully complemented by a vibrant canola crop in the background. A true testament to the beauty of agricultural harmony!

Introducing the latest addition to our farm —a brand-new drive through shed designed specifically for housing our valuable machinery! This shed ensures that all our equipment is undercover and easily accessible whenever we need it. Can't wait to start filling it up!

Facing the challenges of an exceptionally wet and chilly season, our 2025 Everlasting crop has taken its time to establish, growing just 1 cm in six weeks. Though a slow start, we're optimistic that these resilient plants will eventually burst through the soggy conditions and produce an incredible bloom. Can't wait!

Our canola stands resilient amidst an unusually wet and cold season. Despite the challenges of excess moisture at their roots, the canola is in full flower and we should be able to harvest a good crop come November.

After lots of rain, our boomspray has become bogged in the canola crop. It was trying to spray for a fungal disease that sometimes affects canola when it flowers.

Our cute but annoying lambs! (L-R) Valerie, Stevie, Lindsay and Billyoats (absent)

🌸 It's Competition time! 🌸

Order online throughout August, or email a picture of your everlastings, if you're not looking to purchase...
You will be entered to win a 50g packet of everlastings!!

Keep in touch | We'd love to hear about your experience of growing Lucinda's and Zara's Everlastings. Send some pictures! Follow us on the social links below, send us your questions, progress updates and photos to jen@everlastings.com.au
